

The original red flexible hose 70/100 and 125

Function:

This flexible hose is suitable for all market-standard ventilation systems. The free end of the hose is pushed onto the lower end of the vent pipe and fixed with the pre-assembled hose clamp. The connection socket is then pushed into the underlying connector of the ventilation pipe. Ensure the inserted lip seal is correctly seated in the connector during installation. The socket position in the installed state is in a gradient with an inclination of min. 45°.

Variants:

- Flexible hose 70/100 for connection to ventilation pipes DN 70 or DN 100
- Flexible hose 125 for connection to ventilation pipe DN 70
- Hose lengths variant 70/100 500 mm; variant 125 600 mm
- All flexible hoses are inherently UV-resistant
