

Support system HMAX

Data sheet

Function:

Support for the installation of all types of coverings, especially stone slabs and wooden structures. Height adjustment using compensating rings makes it easy to level out any unevenness in the foundations and any slopes. This support can be installed directly on the damp-proofing membrane. Protective mats are not required in areas subject to normal wear and tear (additional protective mats must be fitted in areas frequented by the public, such as entrances to public buildings, cafeterias, etc.).

Options:

Joint divider widths 3 mm and 4 mm, removable joint divider wings.

KALA wood: a level surface without wings fitted under wooden components.

Extension tubes in height 60 mm and 145 mm optionally available..

Packing:

Carton packaging

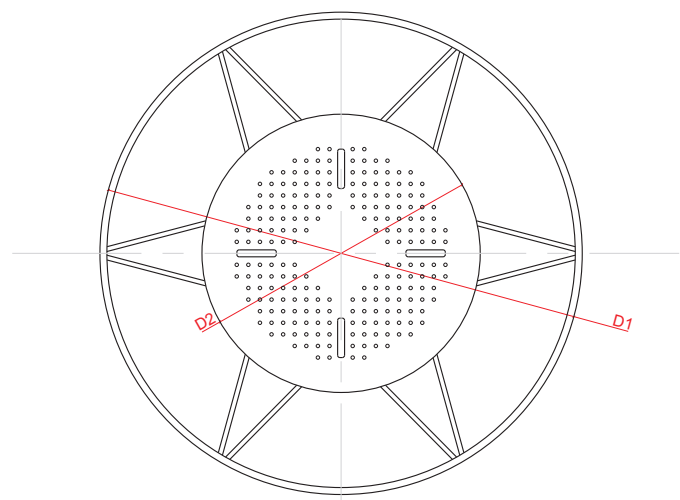

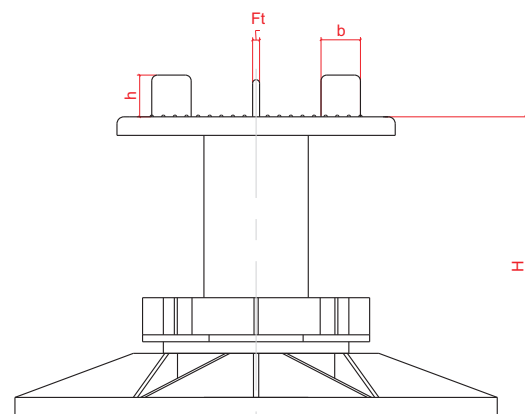

For further information please call your KALA technical advisor.

KALA, K.-H. Lange GmbH+Co. KG reserves the right to any change as may be technically or legally required without prior notice.
