

KALA terrace support system

Function:

Terrace support for the installation of all surface types, particularly stone slabs and boardwalk finishes. The height adjustment and equalizing elements permit easy levelling of surfaces and slopes. In combination with the pressure disc, which is available as an accessory, the KALA support forms a sliding support system for direct installation on seals. Additional protective mats must be fitted in areas frequented by the public, such as entrances to public buildings, cafeterias, etc.

Versions:

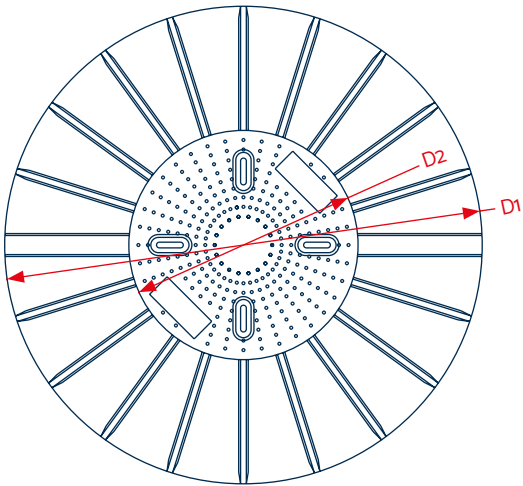

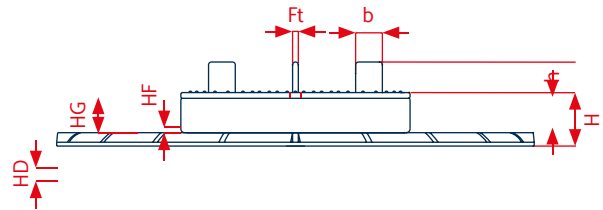

- Joint dividers for joint widths of 3 mm ¹, alternatively available in different joint widths
- Joint dividers separable for installation in a pattern or at the edge

Package units:

- Supplied in cartons, PU 100 units
- Support system (joint divider and basic element) or joint divider solo, basic element solo

Accessories:

- ProSilent equaliser disc
- Equaliser disc, splits into quarters
- Equaliser ring
- Pressure disc
